

T212toXSLX

Brief: Create a script that allows for data to be scraped from a Trading 212 account to an excel/google sheets spreadsheet.

This is the brief, very simple. The thing is, i am competing against others to get the role of CTO of the national student management fund, a society with 100+ members. Therefore, i will do everything i can to make it exceptional before the deadline.

☒ ~~Create Git repo~~

☐ Publish to Github

Stage 1 - Basics

☐ Use and test trading212 api calls

☐ Use and test excel io libraries

☐ put them together

☐ format a sheet for this information

Stage 2 - Visualisation

☐ Test graph generation in excel

☐ Create meaningful pie, hist, and line charts with T212 data

☐ Interactive dashboard

Stage 3

- ☐ make functioning deepseek api calls
- ☐ behavioural finance dropdown menu
 - ☐ Herding (buying after strong price moves?)
 - ☐ Show charts of "emotional trading moments"
 - ☐ Loss aversion (selling winners too early?)
